Paytm, the e-commerce website, says one would soon be able to use its mobile wallet for making payments at places without an internet or with zero data connectivity. The company has taken on ideas and technology from Alipay, payments arm of Chinese e-commerce giant Alibaba, largest investor in Paytm. And, has come up with new features for its mobile app, in the run-up to opening a payments banks. According to Nitin Misra, head of payment products at Noida-based Paytm, by August, users would be able to pay via the app, without the need for using the internet. The company is in ...
